Dear Manager,

I am writing to apply for the Welding Engineer position as advertised.

Please enjoy our tongue-in-cheek application to help you address your current welding skills requirements.

With rapid advancements in robot technology, the use of a cobot welder in an engineering workshop is a piece of equipment that every employer needs to seriously consider. A cobot welder can add real value to your organization with the current shortage of skilled labour so I humbly request that you give this cobot welder job application the consideration it deserves.

Talk to us about customised options for your business.

- Outright Purchase.
- Short Term Lease for a Project.
- RaaS (Robotics as a Service) Only Pay for the Hours you Use!

I would enjoy having the opportunity to discuss with you further how Cobot or Robot welding could assist your business and help increase your productivity while also addressing the current skills shortage. As New Zealand Robot Welding Specialists, we can support you to make your transition to automation a success.

Thank you and I look forward to hearing from you.

Kind Regards,

Matthew Fisher

Managing Director

Autoline Automation

P.S. Please forward this application to the right person within your organisation for an increase in productivity and cost reductions!
